

UNITED STATES (GOVT OF)

Rating Analysis - 9/11/12
Debt: \$15.2B

EJR Sen Rating(Curr/Prj) AA/ AA-
EJR CP Rating: A1+
EJR's 1 yr. Default Probability: 1.2%

Sweet Sixteen. The National Debt of the US has crossed \$16T with no signs of abatement in sight. Neither side of the political aisle has a viable plan to 1) reduce the high structural budget deficits and 2) reduce the debt, both of which stifle growth. Debt as a percentage of GDP has not been at the current level of 104% since the Second World War, and the US suffers from chronically high unemployment and economic stagnation. Political and economic leadership are essential but are apparently unable to address the problem. (Simpson Bowles would cut a total of \$1.5T over 10 year or only 11% from the \$1.4T annual deficit.) Prospects of QE3 is unlikely to enhance real GDP or reduce sov debt but is likely to inflate costs, placing additional strain on US consumers. We are affirming; QE3 will likely trigger a neg. action.

From 2007 to 2011, US's debt rose 13% annual while GDP rose annually 2%. Unfortunately, with an annual federal budget deficit in the area of \$1.4T, debt is likely to reach \$16.7T as of the end of 2012 while assuming GDP grows 2.5%, total GDP is likely to reach \$15.7T. Therefore, as of the end of 2012, debt to GDP is likely to be in the total GDP is likely to reach \$15.7T. Therefore, as of the end of 2012, debt to GDP is likely to be in the area of 106.5%. Assuming the federal deficit for 2013 remains at \$1.4T and GDP growth is 2.5%, the total debt will rise to \$18.1T and GDP will rise to \$16.1T, resulting in debt to GDP of 112.6%. In comparison, France's and Italy's debt to GDP are 81% and 117% respectively.

Economic Growth

Economic growth has been anemic, averaging less than 2% on an annualized basis. The last annualized GDP growth showed that the US economy grew 1.75% YoY. Monetary stimulus has had no real effect on the general economy with the exception of greatly inflating individual cost structures. Wages in the US continue to be negative on an inflation-adjusted basis while costs on every-day items continue to rise. A major concern continues to be tepid economic growth and an overhang from the pending retirement of the baby boom generation.

As can be seen from the below chart, over the past couple of years GDP growth has been near Canada albeit at a slightly lower pace. although as of the end of 2009 and 2010 growth was negative and below Canada's. A major issue is that if the US is running hefty deficits with an economic recovery and depressed interest rates, the deficits might grow faster under less salubrious conditions.

Fiscal Policy

US fiscal policy is disconcerting with trillion dollar plus deficits for four years and a national debt over \$16 trillion. Sequestration will result in only a minimal reduction in the rate in annual spending growth. Plans to reduce the budget deficit by both parties are inadequate and will contribute further to deteriorating financial flexibility. Entitlement spending which accounts for the majority of budgetary expenditures requires extensive reform and without it, the US cannot engage in any real meaningful deficit and debt reduction.

	Deficit-to-GDP (%)	Debt-to-GDP (%)	5 Yr. CDS Spreads
United Stat	8.2	100.9	40
Canada	4.5	31.5	N/A
Germany	1.0	81.4	63
France	5.2	88.9	140
Italy	3.9	120.0	466
Portugal	4.2	106.8	662

Sources: Bloomberg and IFS

Unemployment

While BLS announced unemployment rate was reduced from 8.3% to 8.1%, nearly 400K was eliminated from the work force. The labor participation rate of 63.5% hasn't been this low since the Reagan admin. While the US added 96K jobs in Aug. nearly one third of them were in bars and restaurants. Also more discouraging are statistics on disability as at present according to BLS 6.25% are currently receiving disability vs. 2.8% workers in 1992.

	Unemployment (%)	
	2010	2011
United Stat	9.6	9.0
Canada	7.6	7.5
Germany	7.4	6.8
France	9.7	9.8
Italy	8.3	9.2
Portugal	11.1	14.0

Banking Sector

The US Banking sector continues to be stagnant. Loan growth rates recorded by some banks have been the result of portfolio acquisitions rather than organic growth. The yield curve in the banking system continues to be on a downward trend with no abatement in sight. QE3 will further depress and already depressed yield curve in the banking industry. The US banking industry is heavily concentrated with the top six banks in the US accounting for 56% of GDP.

Bank Assets (billions of local currency)		
	Assets	Cap/ Assets %
BANK OF AMERICA	2,129	10.8
JPMORGAN CHASE	2,266	8.1
CITIGROUP INC	1,874	9.6
WELLS FARGO & CO	1,314	10.8
GOLDMAN SACHS	923	7.8
Total	8,506	
EJR's est. of cap shortfall at 10% of assets less market cap		282
United States's GDP		15,094

Funding Costs

Despite weakening credit metrics, the US has seen a significant decline in its funding costs over the past couple of years because of "monetary easing" (i.e., the FED's purchasing US Treasury debt) and a flight to quality stemming from the EU credit crisis. As can be seen in the below graph, the ten year debt yield has declined from 3.3% to 2.2% and the 2 year yield is below .5%. Our concern is that funding costs will rise over the next couple of years and further

Ease of Doing Business

Major factors for growing the economy are the ease of doing business and the economic freedom; although not the sole factor for determining economic growth, a country which makes it easy for businesses to operate and provides a reasonably free environment to conduct business has a good chance for growth. The chart on the right indicates that with an overall rank of 4 (1 is best) is strong.

The World Bank's Doing Business Survey*

Sovereign Rating Methodology

Egan-Jones takes the perspective of the investor as its primary point of view when developing the ratings it issues for sovereigns. Therefore, in the case of sovereign ratings, we attempt to take a more holistic view of credit quality to include not only analytic comparisons of various sovereign issuers but also the impact on our quantitative and qualitative analyses by current global, sovereign, governmental and market events, including the effects of government investments in speculative, volatile or other high risk investment products. For example, many sovereign issuers have taken on significant exposures of major financial institutions over the past several years. Hence, we calculate the under-funding of financial institutions and include this amount in the total indebtedness of sovereigns. (We use a base assumption that no country can afford to allow its major banks to fail and therefore we believe that there will almost always be an intervention by either a host or allied nation should financial institutions or markets require support at some measurable level.)

Generally we devise modeling calculators and do an analysis that examines the debt load of a country with respect to its GDP and other economic indicators. The analysis is then adjusted to reflect the outlook on a myriad of factors that reflect the firm's overall view of the sovereign debt and the quality of the country's ability to meet and thrive under such load. Some of the qualitative factors that impact our ultimate assessment of credit quality such as the flexibility, stability and overall strength of the economy, ease of tax collection, acceptance of contract law, ease of doing business, and prospects for future growth and health. The non quant issues are generally subjective and a moving target, so each rating of a sovereign may differ because of the non-quantitative nuances being addressed. Note, debt levels for many sovereign issuers have increased over the past decade and has accelerated recently, effecting the implied ratings.

Nota Bene

History has proven that defaults on domestic public debt do occur. In fact, seventy out of three hundred twenty defaults since 1800 have been on domestic public debt (1). Egan-Jones does not view a country's ability to print its own currency as a guarantee against default. Additionally, Egan-Jones generally views cases of excessive currency devaluation as a de facto default.
